

The Glazpart Group of Companies  
Plastic Injection Moulders

## Glazpart group of companies PFAS compliance statement - USA

This compliance statement refers to:

The European Union **Registration, Evaluation, Authorisation, & Restriction of Chemicals (REACH)** 1<sup>st</sup> June 2007, plus all additional annexes, governing the production, use & importation of chemical substances.

Toxic Substances Control Act (TSCA)

Poly-fluorinated alkyl substances are a group of in excess of 4700 chemicals used in various industrial applications. PFAS are present in thousands of everyday items and are sometimes known as the "forever chemicals". The polymer industry has taken significant steps to eliminate PFAS from the production of plastics working with the ECHA.

To the best of our knowledge, Glazpart do not use Polymers that contain PFAS chemicals and therefore comply with current European & United States of America regulations covering the use of PFAS in polymers used to produce products supplied. Glazpart Group of Companies work hard to ensure that all the polymers used in our production processes do not contain chemicals listed among the **Substances of Very High Concern (SVHC)** or substances listed within the Chemical Reporting Data (CDR) framework. This includes chemicals that may be released into the environment from our products during normal and reasonable use. Polymers used are reviewed in line with our standard process.

Registration of products manufactured and supplied by Glazpart Group of Companies is not required.
